
Toxic Substances Control Act (TSCA) 1976 Compliance

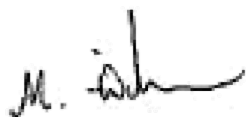

GTS Flexible Materials Ltd (GTS) manufactures coatings and laminated composites for industries worldwide. The company complies with applicable national and international chemical regulations, as well as customer requests that may restrict certain chemicals.

GTS confirms that chemicals restricted under TSCA Section 6(a), including those addressed in the EPA's five final rules of January 6, 2021, are not intentionally added during the manufacture of GTS adhesives, and there is no indication of their presence in raw materials based on available supplier information, including material safety datasheets.

For substances also restricted under the scope of EU RoHS/ RoHS 3 directives, finished GTS products are independently analysed to confirm that these chemicals are either within regulatory limits or not detected (ND) at a detection limit of 5 mg/kg, and therefore fully RoHS Compliant.

For other TSCA-restricted substances, GTS determines compliance based on supplier declarations and available information and does not independently analyse raw materials for these chemicals.

GTS maintains ongoing review of TSCA-restricted substances and will provide customers with updates as regulations evolve.
